Center-TRT Logic Model

Center of Excellence

INPUTS	ACTIVITIES	OUTPUTS	OUTCOMES		
If we have these .	We can do this. .	Which will produce this. . .	Which will lead to these. . .	And then these. . .	And then these. . .

INPUTS (If we have these.)

- UNC HPDP infrastructure
- Center-TRT expertise
- CDC - DNPAO funding expertise
- State OP Programs expertise and advice
- National Experts expertise and advise

ACTIVITIES (We can do this..)

- Maintain Center-TRT infrastructure (staff, website, etc)
- Meet with advisory groups, partners and experts
- Market and promote products and services of Center-TRT
- Develop a system to solicit interventions from the field.
- Identify interventions and engage intervention developers in the process,
- Review and translate interventions
- Disseminate interventions and implementation tools to practitioners .
- Offer an annual obesity prevention course for practitioners
- Offer web-based trainings on nutrition, physical activity and obesity preventions

OUTPUTS (Which will produce this. . .)

- www.center-trt functions well
- Meeting and conference call summaries
- Multiple channels for communicating with field practitioners (print, web, presentations, publications)
- # of interventions reviewed, translated and posted each year
- Active links to implementation tools for intervention strategies are posted
- # and type of downloads from www.center-trt.org (interventions, materials, etc)
- # practitioners that attend the annual obesity course
- # practitioners that complete web-based training or participate in webinars

OUTCOMES (Which will lead to these. . .)

- Cohesive, coordinated messages provided to field regarding best evidence for intervening to reduce obesity, other nutrition-related chronic diseases
- Field is aware of the interventions, implementation tools that are promoted by the Center
- Field understands and applies theoretical models and frameworks for developing and implementing interventions with potential public health impact
- Field has increased skill and ability to:
  - select intervention strategies that are evidence-based
  - adapt intervention programs for their setting and population
  - implement recommended interventions with fidelity
  - maintain interventions over time

And then these. . .

- NPAO programs and partners **adopt** interventions that address the continuum of the SE Model
- NPAO programs and partners adapt interventions to their setting and population and **implement** interventions with fidelity
- NPAO programs and partners **maintain** interventions over time

And then these. . .

- Programs' Interventions **reach** more communities and more individuals especially those that are disproportionately affected by obesity, other nutrition-related chronic diseases
- Programs' interventions are **effective** in achieving intended outcomes
- Improved nutrition and physical activity patterns
- Reduced prevalence of obesity and other nutrition-related chronic diseases
